New Program Announcement
Vascular and Vein Clinic opens its doors in Portola Valley

The Division of Vascular Surgery announces Stanford’s first-ever Vascular and Vein Clinic. It is now open for patients with venous disease and is located at 3240 Alpine Road in Portola Valley.

The new Vascular and Vein Clinic, part of the Division of Vascular Surgery, recently opened its doors in Portola Valley. It provides comprehensive vascular care for medically-necessary and cosmetic/aesthetic procedures to treat venous disease. This common disease affects more than 30 million people in the United States and is associated with decreased quality of life due to symptoms and/or unsightly appearance.

Treatments are performed by a board-certified Stanford physician in a private and serene setting. Located off of I-280 in Portola Valley, the clinic is close to Stanford Hospital. Medically-necessary treatments may be covered through commercial insurance (more information about treatment coverage is available by calling the clinic).

What’s inside the new Vascular and Vein Clinic?

- Outpatient treatments for leg vein issues including spider veins, varicose veins and venous insufficiency.
- The latest techniques and FDA-cleared technologies performed in a service-oriented private clinic.
- Diagnostic service and consultation.
- The Stanford experience – board certified vascular experts who provide comprehensive care.
- The location is convenient for patients and offers easy parking.
